Digital Business Cards on iOS and Android

The digital business card

Introducing vCards, an efficient and eco-friendly alternative to traditional business cards. Compatible with any smartphone, these digital cards allow recipients to seamlessly add your details to their address book with only a click or scan.

The vCard tool allows you to create a digital business card in a few simple steps. The following slides will guide you through the installation process for both, iOS and Android.

Adding the QR code to OneDrive

1. Create your QR code and download it to OneDrive.
2. Open the photos app on your phone and create a new folder e.g. „Business Card“
3. Download the code from OneDrive and save it in the folder. Make sure it is the only image saved in this folder.

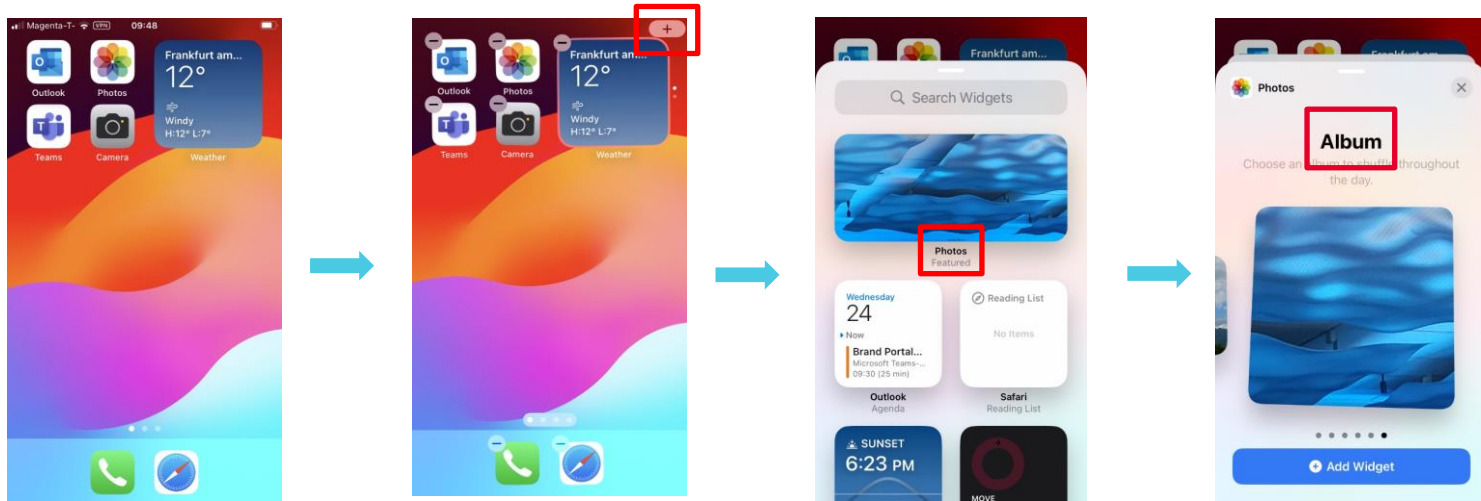

Alternatively, you can send the QR code as an attachment via email to your Deutsche Bank email address, open it on your mobile phone and save it in your photos app.

How to add a photo widget

Before you start, please make sure that you have installed the latest iOS version (17.x upward).

1. Touch and hold the home screen until you can edit the interface. Select "+" on the top to add a widget.
2. Open the "Photos"- widget and chose a widget format from the last 3 options (only those can be linked to a selected album).
3. Tap "Add Widget" and press the home button.

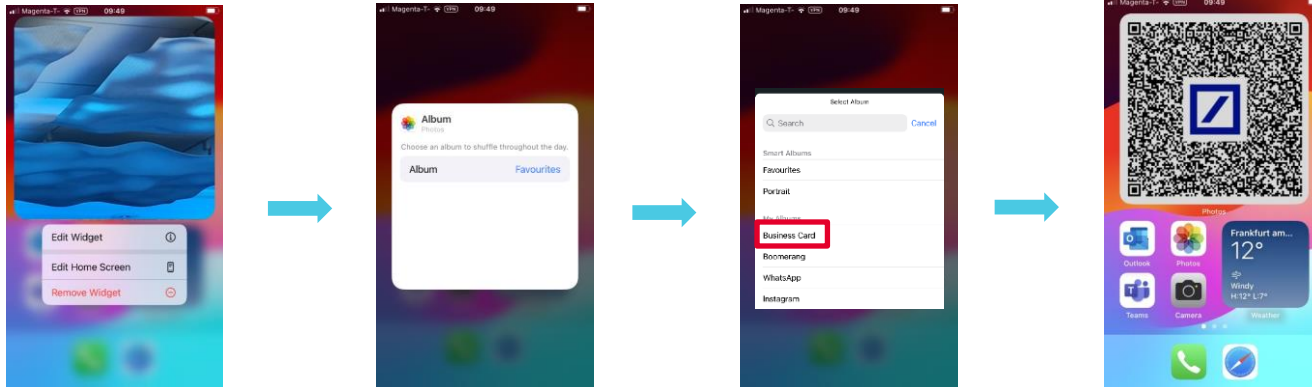

How to load the QR code onto your home screen

1. Touch the photo widget until the operating window opens.
2. Choose "Edit Widget".
3. Tap on the previously created album "Business Card" and press the home button.
4. The QR code is now permanently displayed in the widget and ready to use.

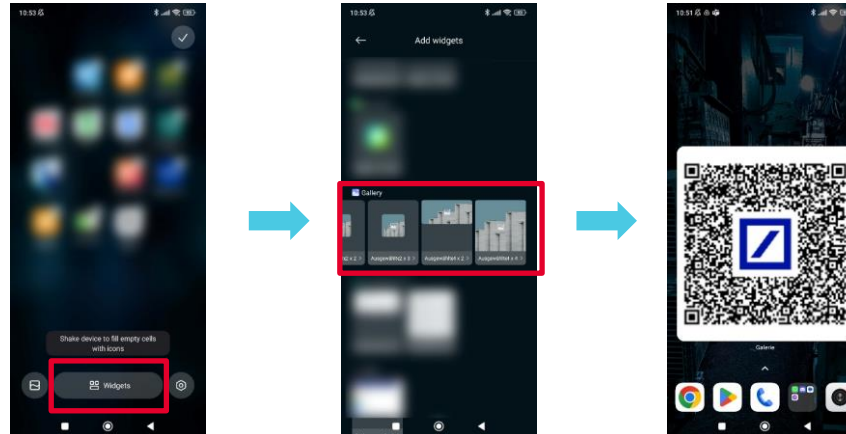

If you've chosen the biggest widget format, the code can be scanned directly from the home screen. For other formats, click on the code to enlarge. Please ensure suitable lighting conditions and maximum display brightness.

How to add a photo widget on Android

1. Touch and hold a free area on your home screen.
2. Select “Widgets”.
3. Scroll to your gallery app and select an image format. We recommend 2x2 or 4x4.
4. Chose the QR code image to be displayed. You might need to install the widget first before being able to select an image.

Android Samsung Galaxy S23

Please note that these features only work with Android 13.

1. Touch and hold a free area on your home screen.
2. Select “Widgets”.
3. Scroll down and select “Gallery”. Then tap “Add”.
4. Tap “Select images”.
5. Navigate to your QR code image and select it, then click “Done”.
6. Touch and drag the widget frame to enlarge it.
